

Development Project Monitoring System

Development Project Monitoring System (DPMS)

is an e-government application system designed to plan, monitor and facilitate the management and evaluation of all development programmes and projects.

With increasing number of development projects to be carried out and limited funding allocation, it is vital to have an effective and useful tool for project monitoring. With the government focusing on sustainable and balanced development for both rural and urban areas, it is crucial for every approved programmes and projects to be well managed, well implemented, within budget and on time to reap the expected benefits. All these can be achieved using a feature-rich and proven system to execute project monitoring processes both at high level and administrative level.

Activity-based monitoring

Objectives

- To provide a single project monitoring system to manage development programs and projects that would also feed information and reporting to central monitoring agencies
- To achieve timely feedback of accurate and complete information for project monitoring through integration with other Line of Business (LOB) systems such as project planning and approval, budgeting and accounting, land ownership and contractors management
- To allow monitoring of both physical (e.g. roads or buildings) and non-physical projects (e.g. research or studies);
- To facilitate the dissemination of timely reporting and information to relevant agencies for better decision-making;
- To minimise manual intervention such as entering of information and laborious scheduling tasks
- To address the needs of implementing agencies for better project management and monitoring purposes;
- To allow future expansion of scope for the monitoring of other project types (for example, the agency's internal projects)

Development Project Monitoring System

Key Features

Project Profile

The project profile captures project details such as Project Name, ID, Vote Head and etc. It also allows financial allocations to be defined and entered for each sub-project.

Project Financial Planning

This feature captures planned monthly expenditure and planned distribution of funds for each sub-project.

Financial Monitoring

Financial monitoring is essential in a project to ensure there are no incidences of overspending, corruption, and misspending. It captures annual budgetary allocation and expenditure, supplementary, variation orders, warrant, payments etc.

Physical Planning and Monitoring

The system has different activity templates to cater for different project types which are categorised as Physical projects (e.g. roads or buildings) and Non-Physical projects (e.g. studies or research). It allows multiple units of measurements to be defined (e.g. ha, km, m3).

Contract Details

The system captures contract particulars such as contractor's details, contract period, contract sum, and other relevant information.

Contractor's Performance Review

The contractor's performance review is also captured for timely assessment. This information would also be needed in the future during assessment of contractors for other projects.

Project Completion Report (PCR)

Apart from that, the system has a built-in alert system or online reminder including emails notifications and updates. Online submission capability also ensures the reports are sent without delays.
